

MODEL N RAINMAKER CONFERENCE

Mindlance to speak at the Model N Rainmaker Conference

In recognition of our growing partnership with Model N, Mindlance has been invited to participate in the annual Rainmaker user conference, to be held on February 23 - 25 at the Ritz-Carlton in Laguna Niguel, CA.

Mindlance will be speaking about issues and risks associated with operating in a multi-vendor environment and will be providing solutions based on our experience working with such customers. Mindlance will focus on a variety of topics, both functional and technical, including:

- Optimal sequencing for module implementations
- Consolidated reporting solution options
- Integration strategies and best practice recommendations

In addition, Mindlance has recently launched a new offering, a Vendor Focused Technology Assessment. This offering is intended for customers that are considering a migration from legacy applications to a more current application platform. Mindlance offers a comprehensive technical assessment of the new platform to be performed as part of the vendor selection process. This includes a comprehensive technical evaluation of the platform, a risk assessment, and an inventory of required internal support skill sets. This service is designed to assist our customers with the software selection process, and allow key IT stakeholders to make more informed decisions and plans about implementation, ongoing support costs, and ideal support resource profiles.

Mindlance is looking forward to the opportunity to highlight our growing relationship with Model N, and discuss the ways in which Mindlance can add value to customers contemplating Model N applications in their landscape.

As a sponsor of the Rainmaker conference, Mindlance is pleased to offer a 10% discount to any conference attendees that register using Mindlance's discount code: SPON9
